I MALMFÄLTEN AB

Advisory in the industry

-When we started the business we decided that our slogan was going to be "PT in Economy", PT meaning Personal trainer in Economy.

-We try to talk about business and economy using a language that our clients understand to give them a better understanding of their own company's economy. That will give them a better possibility to make decisions about investments, new employees, new projects or, if needed, cutting costs to survive.

-We always make sure to meet our clients in person to go through what the status of their company is, we never just hand out a report without making sure that the client understands what is in it.

-Our mission is to make our clients grow and succeed in their business.

Advisory in the industry

As an addition to traditional counselling we also help our clients when it comes to financial questions concerning investments of some kind.

We help them by contacting banks and other financiers that may be of interest and help in their business.

We help them with budgets, calculations and other documents needed for the investment to go through.

The client is well equipped when meeting with the financiers and the financiers can easier come to a decision.

Advisory in the industry

What we offer our clients

- Traditional business administration including ongoing bookkeeping, salaries, taxes
- Financial statement at the end of the year including personal counselling to make sure that the client understands the status of the business
- Financial advise concerning investments in the business
- Property valuation, industrial/commercial properties

Advisory in the industry

-Our ambition is to have an proactive approach, we aim to give the clients information about the status of their business before they ask for it.

-We try to work as much as possible with the digital tools available which is an important part of being able to give our clients information in real time rather than months after it actually happened.

-The industry that we are a part of is going through some major changes and we are convinced that our way of working is in the direction that the change is going.
